

Empirical Evaluation of Management Practices I

Introduction to Python

Prof. Dr. Dirk Sliwka Jesper Armouti-Hansen

11/10/2021

- Sessions (Lectures with integrated exercises):
 - Mondays: 14:00 - 15:30 and 16:00 - 17:30
 - Tuesdays: 10:00 - 11:30
- All sessions take place on Zoom (See ILIAS for instructions).
- Exam:
 - Date: TBA!
 - Format: Remote.
- Course website: github.com/armouthansen/EEMP2021

Organizational Issues (Coding)

For all our coding exercises as well as the exam (most likely), we will be using notebooks in Google Colab (colab.research.google.com/).

If you have a functioning google account, you should be able to:

- Create new notebooks
- Save notebooks to your Google Drive and open them again
- Open notebooks from Github repositories
- Share notebooks with your fellow students

Thus, make sure that you have a Google account!

Working in groups

When doing exercises in the lecture, you will work in groups of three in break-out rooms on Zoom:

- The groups are randomly assigned by us
- Within groups you should share your google account email so that you are able to colaborate
- We (the lectures) will go from room to room to check your progress and and answer your questions

Questions

- If the question is not urgent, please ask during the lecture
- If urgent, write me an email (j.hansen@uni-koeln.de)

Today's agenda

The goal of today's session is to give you a short overview of working with python for data analysis. This includes:

- An overview of basic data structures and commands in python
- Providing a toolkit for data analysis in python

Note: Today's session is far from exhaustive. More packages, concepts and commands will be introduced later in the course.
